

KRISHAN KUMAR JANGID

+916376534653 kjangidkj21@gmail.com [linkedin.com/in/krishan](https://www.linkedin.com/in/krishan)

Summary

Aspiring Java Backend Developer with strong knowledge of Java, Spring Boot, RESTful APIs, and databases. Skilled in developing scalable backend applications, implementing clean code practices, and working with Microservices architecture. Passionate about building efficient, reliable, and maintainable software solutions.

Education

Bachelors of Technology <i>Jodhpur Institute of Engineering and Technology , (CSE)</i>	Graduated: 2025 <i>CGPA: 7.70 / 10</i>
Engineering (Diploma) <i>Govt. R.C. Khetan Polytechnic College Jaipur ,(CSE)</i>	Graduated: 2022 <i>Percentage: 70%</i>

Skills

Programming & Querying: Java(Core & Advanced), SQL, MongoDB ,OOP, Collections, Multithreading, Microservices
Frameworks & Others: Spring Boot, Spring Security, RESTful APIs, Maven, Microservices, Spring MVC, Spring Data JPA, Postman, GitHub ,Docker, Kubernetes, Linux , Autonomous AI Agents(N8N).

Experience

Red Hat Certified System Administrator (RHCSA)	08/2023
RHCSA Curriculum Focused: Gained hands-on experience in Red Hat Enterprise Linux (RHEL) environment, focusing on system administration, configuration, and management. - Performed essential tasks including user and group management, permissions handling, and configuring local storage using LVM & Configured firewall settings (firewalld) and managed SELinux policies to maintain a secure server environment.	
Data Science & Machine Learning Intern HDLC Technologies	06/2024
Data Analysis & Modeling: Successfully completed a intensive program focusing on Data Science methodologies and Machine Learning algorithms. - Worked with high commitment to develop and deliver a technical project, ensuring data accuracy and model efficiency. - Applied statistical techniques to analyze datasets, identifying key patterns and insights to drive data-driven decision-making & Gained hands-on experience in building and validating machine learning models to solve real-world problems.	

Projects

AntiHomes — AI-Agent Driven Smart Living & Microservices Platform Java
- Technologies: Java, Spring Boot, Microservices, MongoDB, React Native, REST APIs, Autonomous AI Agents. - Engineered an integrated Living-as-a-Service (LaaS) platform to automate Room Renting, Food Mess, and Laundry management through a scalable Microservices architecture. - Engineered a scalable backend architecture using Spring Boot and Microservices to handle multi-role user data and business logic.Integrated Autonomous AI Agents for intelligent task execution and automated decision-making - Optimized data persistence and retrieval by integrating MongoDB, ensuring efficient handling of complex user profiles and application states. - Designed and integrated RESTful APIs to bridge the gap between the Java backend and the React Native frontend seamlessly.
AcademiaFlow - Teacher & Student Management System Python (Tkinter), MySQL, SQL Connector.
- Automated administrative workflows using Python and MySQL, significantly reducing manual paperwork. Implemented Role-Based Access Control security to provide tailored, role-specific interfaces for streamlined data privacy. - Optimized data management through a robust relational schema for attendance and user profiles. - Engineered for scalability, featuring a modular design ready for cloud and mobile integration.
